CARE OF MOUTH AFTER CROWN AND BRIDGE CEMENTATION

After today's treatment:

Today we have cemented your crown and/or bridge with permanent cement. You may treat this restoration as you would a normal tooth.

1. Brush and floss daily.
2. Eat normally; however, be aware that habits such as chewing ice and biting on fingernails or objects may result in chipped porcelain. We cannot be financially responsible for any repairs to the porcelain.
3. If the crown or bridge feels loose at any time, please contact our office and we will schedule an appointment to evaluate.

If you have any concerns or questions, please feel free to contact our office immediately.
